**5TH ANNUAL**

Built with insights from the likes of AbbVie, Sanofi, Amgen and Takeda; CDD for Biologics has been specifically designed to help biopharma companies define strategies to further adapt these tools, mitigate data availability issues and address computational-experimental challenges to add immediate value to their biologics pipelines.

This dedicated platform will enable you to address key challenges such as those of widespread data sharing, the experimental constraints of generating enough data and the importance of overcoming data silo-ing with organizations, as well as exploring new opportunities including a novel, AI-derived approach, an automated high-throughput engineering platform, successfully deploying ML algorithms and more.
